

Dear

I write to urge you to oppose House legislation to require 100 percent carbon-free electric generation in Minnesota by 2050. As an electric consumer, I am deeply concerned this bill threatens the provision of safe, reliable, and affordable electric power in Minnesota.

Renewables are an important and growing part of Minnesota's power mix but they can't do it all. The wind doesn't always blow and the sun doesn't always shine! We need a balance of fuels to ensure safe, reliable and affordable power in our state.

Please don't leave us without the power supply we need to keep our lights on, our heat available and our electric bills affordable! Please vote against this measure and oppose it moving forward in the legislature.

Sincerely,
