

Dear

I write to urge you to oppose HF 1956, a bill to require 100 percent carbon free electric generation in Minnesota by 2050. As an electric consumer, I am deeply concerned this bill threatens the provision of safe, reliable, and affordable electric power in Minnesota.

Renewables are an important part of Minnesota's power mix but they can't do it all. The wind doesn't always blow and the sun doesn't always shine! We need a balance of fuels to ensure safe, reliable and affordable power in our state.

Please don't leave us without the power supply we need to keep our lights on, our heat available and our electric bills affordable! Please vote against HF 1956 and oppose it moving forward in the legislature.

Thank you for considering my views.

Sincerely,
